(57) Abstract :

Deep learning based Artery Deposition Analysis using Segmentation and CNN Classification Abstract: If someone has a problem with their circulatory system, it can be harmful to their health. When an electrocardiogram is performed, it can be used to categorise this disease. ECGs are the most effective way to show how a patient is doing right now, as well as to diagnose and treat a wide range of heart problems. Changes in ECG parameters such as P-waves, QRS complexes, and T-waves can reveal the condition that caused artery deposits. Many artery diseases, which can be fatal, cannot be treated with new arteries. There has to be a way to categorise artery diseases so that they can be identified. In this project, an algorithm known as CNN will be used to classify artery diseases.
